JAPAN APPAREL・FASHION INDUSTRY COUNCIL

The Japan Apparel and Fashion Industry Association (hereinafter referred to as JAFIC) was established as an unincorporated association in 1979 with the aim of strengthening product competitiveness, implementing new technology, and improving productivity in the apparel and fashion industry.

The threat of transmission of the COVID-19 infection that has lasted for about three years has finally subsided. At the same time, the global economy has begun to move at a dizzying pace and the industry is also slowly recovering. However, the dire situation and uncertain market conditions still persist. On the other hand, there is an increasing expectation in the industry for corporate management to place an emphasis on ESG and a major change from the conventional business model is therefore required.

Through the activities of the committee, JAFIC will support its member companies through seminars and dissemination of useful information obtained as a result. JAFIC will also support its members by scrutinizing measures to solve the members' various problems. In addition, we will maximize the benefit of an industry group and seek the necessary support from the country and the government for the continuous development of the industry.

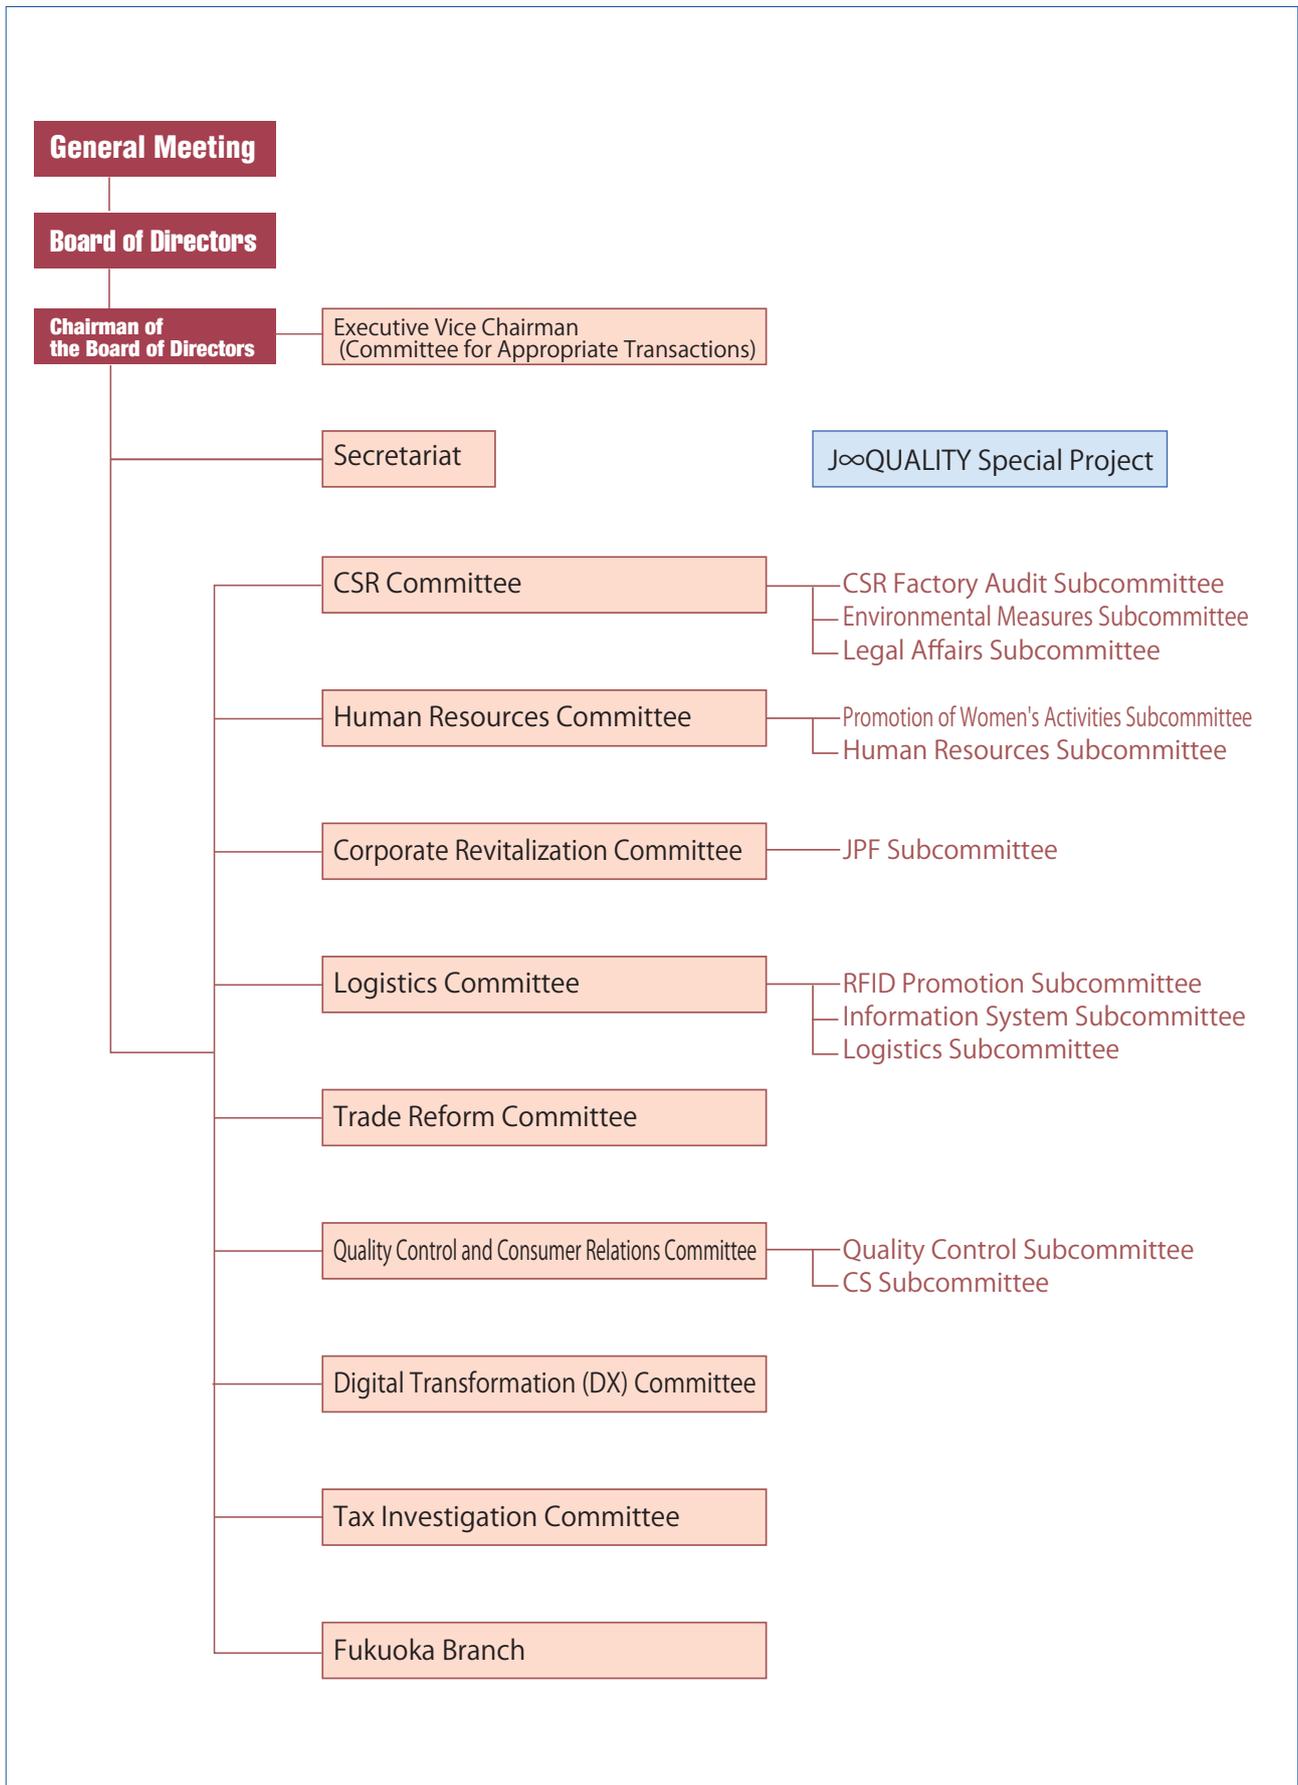

Overview
